Mission Statement, Quality and Environmental Policy

MISSION STATEMENT

By innovative thinking and problem solving, Solderman Industrieresurs designs, sells, customizes, manufactures and installs

- *special machines and equipment for industrial automation,*
- *machines and connectors for soldering on automotive glass, and*
- *serial produced components*

of high quality and reliability, and with high delivery and environmental performance.

QUALITY POLICY

We design products, and carry out our missions and orders with customer focus, and high quality and reliability as our core values. Key activities for achieving the core values are:

- By creative and efficient product development we supply our customers with smart solutions and competitive products.
- By efficient production we supply products of high quality and with high delivery performance.
- By an effective management system for quality, we systematically control the quality of products and processes and verify that we fulfil customer requirements and the statutory and regulatory requirements applicable to the products we offer.
- We establish quality objectives to continually improve our products and processes in order to enhance customer value, competitiveness and financial viability.

ENVIRONMENTAL POLICY

We design and manufacture components, machines and machine parts with the ambition to minimize environmental and health impact, and when possible prevent pollution, for our customers and the users of our products. We strive towards a vision where all soldering on automotive glass are lead free. This implies that

- our objective is to offer lead free alternatives and solutions for components and machines for soldering,
- we choose metals and other materials with low environmental impact,
- our designs are energy efficient, and have low maintenance needs,
- our designs are in compliance with legal and other statutory environmental requirements.

At our site we strive to minimize emissions to air and water and to minimize environmental impact from energy use, chemicals and waste. We commit to prevent pollution wherever possible, and to comply with legal environmental requirements in all our activities.

Olof Börjesson, Managing Director
